Comments /notes on tonight's mission and this interpretation: <p>ELEVATOR MOUNTAIN –</p> <p>The main elevator fire perimeter is at 2,665 acres. The south third of the fire is relatively quiet. The majority of the heat is located on the NE flank and in the moderate spot to the east of the main fire. Some heat was detected in the north central area of the old Eagle Rock fire, mapped as scattered heat.</p> <p>Raven Creek --</p> <p>Light to moderate perimeter expansion on the main Raven Creek fire and the spot fire to the E/NE. Both fires are burning actively on the perimeters. The large spot to the NE of the fire is currently interpreted at 132 acres (up 28 acres since the 9/17 IR flight).</p> <p>Please provide feedback to improve these products. Thank you, -ts</p>
